

ENERGY POLICY

1. We recognise the importance of climate change and will minimize energy consumption within our business and projects. Our ultimate goal is to be able to offer carbon neutral buildings to our customers.
2. We will maintain an independently registered ISO 50001 Energy Management System in order to improve the company's energy performance and to ensure that this policy is implemented.
3. We will review energy performance annually and set objectives and targets each year, which reflect our philosophy of continual improvement in energy performance.
4. We will provide the information and resources (personnel, equipment, finance, IT and training) in order to achieve objectives and targets.
5. We will comply fully with all relevant energy legislation, regulations and codes of practice related to our energy use, consumption and efficiency.
6. We are committed to reducing our energy consumption impacts through responsible purchasing of energy efficient products and services and design for energy performance improvement.

William J Jerram
Managing Director
